Dear Sir / Dear Madam:

I would like to introduce myself to you. My name is José Luis Erbes from Argentina and I belong to the social and commercial organization Onion Progress.

This international organization was born from scientific research and development with the aim of finding the tools with which we can overcome the vulnerability of humans and their social structures.

Human beings take naturally the number of circumstances that endanger our integrity. Among them, diseases, climatic or terrestrial events and others that arise from the way we organize ourselves socially, such as the lack of food, water, energy and other resources. Not to mention our defenselessness in the face of an astronomical event that we could not avoid or in the face of what we consider irreparable, death.

Although it is uncomfortable to accept, the human being is born, grows, begins his path individually or in association with others, waiting for the end of his life. He fights and competes to survive, with his own abilities or with the few tools that society provides him. He must face many challenges that wear him out and shorten his time. Some are not aware of it, others seek to live intensely. But everyone, even those who choose to do it healthily, know that so far there is not enough knowledge or technology and they even resign themselves to it being so.

As a scientific organization and with this analysis done, we understand that human beings urgently need scientific and technological solutions to be able to overcome these vulnerabilities and counteract the circumstances that produce them. This is why Onion Progress offers all its research, development and innovation capacity to generate those scientific solutions and the most advanced technologies that allow us to end our vulnerability.

We feel compelled to say that we have the knowledge to do so. Verifiable knowledge that we will put to the test and share little by little until we achieve the objective. And we will do it within the structures and established social order, for that reason we propose ourselves as a company and a social organization.

As a company to be able to obtain financing for our projects and as a social organization so that these projects do not have borders or discriminate races or cultures and reach humanity as a whole.

You will understand then that we need the collaboration of everyone who understands the importance of what we want to achieve, whether as a contact agent, a small or large investor, an associated company, a scientific collaborator, a liaison with public and private Institutions or simple support or contributor of ideas.

Now you know who we are, we hope you will join us.

José Luis Erbes
