

# WEBINAR: A Green Product Certification Scheme for the Dairy Sector in Sri Lanka

Monday 15<sup>th</sup> July, 1pm CEST – [REGISTER](#)

Join this webinar to learn about a new green product certification in Sri Lanka. In a project undertaken from 2017 as part of the 10YFP Trust Fund, the agri-food sector in Sri Lanka was focused on to establish more sustainable consumption and production practices. Improving access to information amongst consumers and businesses was a key aim as surveys showed a lack of awareness of sustainable produce among consumers, a lack of standards, and limited certification systems at affordable prices. In a country where agriculture utilizes 43% of the total land area, the switch to more environmentally sustainable and healthy consumption and production practices are imperative.
